

Refresher on How to Create New Google Colab File

<https://www.loom.com/share/58aea3de49d64eb2ac1a1fe1f903464b>

✓ Step 1: Import SQLite & Connect to Database

```
import sqlite3

# Connect to (or create) the database
conn = sqlite3.connect('NFL_Scouting.db')

# Create a cursor object to run SQL commands
cursor = conn.cursor()

print("Database connected successfully")
```

Database connected successfully

✓ Step 2: Create the Table

```
# Create scouting_stats table
cursor.execute("""
CREATE TABLE IF NOT EXISTS scouting_stats (
    team_name TEXT,
    city TEXT,
    wins INTEGER,
    points_per_game REAL
)
""")

conn.commit()
print("Table created successfully")
```

Table created successfully

✓ Step 3: Insert Sample Data

```
# Insert sample NFL team data
cursor.execute("""
INSERT INTO scouting_stats (team_name, city, wins, points_per_game)
VALUES
    ('Chiefs', 'Kansas City', 11, 29.2),
    ('Bills', 'Buffalo', 10, 26.5),
    ('Cowboys', 'Dallas', 12, 27.8),
    ('Jets', 'New York', 7, 18.6)
""")

conn.commit()
print("Data inserted successfully")
```

Data inserted successfully

Step 4: Filter Teams Averaging More Than 24 Points per Game

```
cursor.execute("""
SELECT * FROM scouting_stats
WHERE points_per_game > 24
""")

results = cursor.fetchall()

print("Teams averaging more than 24 points per game:")
for row in results:
    print(row)
```

Teams averaging more than 24 points per game:

('Chiefs', 'Kansas City', 11, 29.2)
('Bills', 'Buffalo', 10, 26.5)
('Cowboys', 'Dallas', 12, 27.8)

Step 5: Sort Teams by Wins (Descending)

```
cursor.execute("""
SELECT * FROM scouting_stats
ORDER BY wins DESC
""")

results = cursor.fetchall()
```

```
print("Teams sorted by wins (highest to lowest):")
for row in results:
    print(row)
```

```
Teams sorted by wins (highest to lowest):
('Cowboys', 'Dallas', 12, 27.8)
('Chiefs', 'Kansas City', 11, 29.2)
('Bills', 'Buffalo', 10, 26.5)
('Jets', 'New York', 7, 18.6)
```

✓ Step 6: Combo Challenge

```
cursor.execute("""
SELECT * FROM scouting_stats
WHERE wins > 5
ORDER BY city ASC
""")

results = cursor.fetchall()

print("Teams with more than 5 wins, sorted by city:")
for row in results:
    print(row)
```

```
Teams with more than 5 wins, sorted by city:
('Bills', 'Buffalo', 10, 26.5)
('Cowboys', 'Dallas', 12, 27.8)
('Chiefs', 'Kansas City', 11, 29.2)
('Jets', 'New York', 7, 18.6)
```

✓ Step 7: Save and Submit

```
conn.close()
print("Database connection closed")
```

```
Database connection closed
```

Submission Instructions

1. Save the file into your GitHub repo.
2. Make sure to check the box to create a link to Colab.

3. Copy/paste the URL in ISMS submission. Need reminder? Click here
